

1 **ABSTRACT OF THE DISCLOSURE**

2

3 An illumination device, comprising in
4 combination an elongated portable carrier including a
5 housing and a longitudinal elongated window; multiple
6 LEDs carried to emit light toward and through the
7 window; and circuitry associated with the housing to
8 supply electrical power to the LEDs, the circuitry
9 incorporating resistor, capacitor and diode elements to
10 reduce AC input voltage to a level for supply to the
11 LEDs.
